Professional Summary

Full-Stack Developer with 3 years of experience building scalable, production-grade web applications. Delivered a real-time vehicle telematics platform (2,000+ GPS events/sec) and contributed to enterprise compliance and AI-powered solutions. Skilled in Python, Django, React.js, PostgreSQL, Redis, and integrating LLM-powered capabilities into full-stack production systems.

Professional Experience

KPMG India

Feb 2025 – Present

Full Stack Developer | *KCRA — KPMG Compliance Reporting Assessor*

Gurgaon, India

- Architected Django/DRF backend with a layered pattern (Controller → Service → Repository) and RBAC across 6 user roles (Super User, Company Admin, CXO, Legal Admin, Auditor, Owner/Escalator chain) in multi-tenant compliance workflows.
- Built async Excel report generation with Celery + Redis, returning HTTP 202 immediately while background workers process 50,000+ records.
- Implemented immutable audit trail using PostgreSQL transactions — every compliance status change recorded atomically with actor, timestamp, and reason across a 3-stage approval chain (Owner → Escalator → Auditor).
- Designed a dual-source LLM-powered chatbot with intent-based routing — Text-to-SQL engine (multi-layer classification, dynamic schema injection, RBAC filters, SQL safety guardrails) for live compliance data queries, and a RAG pipeline for natural language queries over the tool's internal knowledge base.
- Automated nightly compliance deadline checks via Celery Beat and integrated E-sign functionality into document approval workflows; configured Apache2 as a reverse proxy for production deployment.

AutoPeepal Technologies Pvt. Ltd

Sep 2023 – Jan 2025

MERN Stack Developer | *Vehicle Telematics Platform (Wikitrac)*

Pune, India

- Built real-time GPS ingestion pipeline processing 2,000+ events/sec using Apache Kafka with 3 independent consumers: alert detection, live dashboard, and trip logging.
- Designed WebSocket live dashboard (Socket.io + Redis pub/sub) supporting 500+ concurrent users with sub-second location refresh.
- Implemented geofence breach and speed alert system with Redis-cached geofence data, reducing PostgreSQL query load by 80%.
- Containerised and deployed full stack on DigitalOcean with Docker and Nginx reverse proxy; tuned Kafka consumer parallelism for sustained high throughput.
- Recognised as **Outstanding Performer** at AutoPeepal Technologies for contributions to the Wikitrac telematics platform.

Technical Skills

Languages: Python, JavaScript (ES6+)

Backend: Django, Django REST Framework, FastAPI, Celery, Node.js, Express.js

Frontend: React.js, Redux Toolkit, HTML5, CSS3

Databases: PostgreSQL, MongoDB, Redis

Messaging & Realtime: Apache Kafka, WebSocket (Socket.io)

AI & LLM: LLM Integration, Text-to-SQL, RAG Pipelines, Prompt Engineering

DevOps & Cloud: Docker, Nginx, Apache2, AWS, Azure, DigitalOcean, CI/CD (Azure Pipelines)

Tools: Git, Postman, VS Code

Projects

Digital SOP Management Tool | *FastAPI, React.js, PostgreSQL, Redis, Celery*

KPMG India

- Built end-to-end solo — a production-grade platform to author, version, and distribute Standard Operating Procedures digitally, replacing manual paper-based workflows.
- Implemented multi-stage approval chains with role-based access, user request management, and version control — ensuring every SOP change is tracked and auditable.
- Built RACI matrix tracking and reader acknowledgement system — ensuring accountability across process owners, contributors, and readers.
- Async background processing via Celery + Redis for notifications and approval triggers;

Education

Bachelor of Science (BSc) — Mathematics & Computer Application

Nov 2020 – Jun 2023

Shiv Harsh Kisan Degree College Basti

Basti, India
